ACTIVITY 03: **Server OS and Services Installation**

1. **Opening the Command Window**

- **Task 1**: Open the command prompt on your machine (Windows: CMD, Linux: Terminal).

  Question: What is the command you used to open the command window?

  Answer:

1.2. Understanding DOS Commands

Relating Windows-based to DOS-based commands:

- Windows GUI (Graphical User Interface) offers various features that can also be accessed using command-line instructions.
- **Task 2**: Write the DOS commands equivalent to these Windows actions:
  - **Action**: Copy a file.
    - **Command**: _____
  - **Action**: List all files in a directory.
    - **Command**: _____
  - **Action**: Delete a file.
    - **Command**: _____

2.2.1 Configuring OS/Server Services Commands

- **Task 3**: Research or use the following commands to configure basic OS or server services:
  - **net start [service name]**: Start a service.
  - **net stop [service name]**: Stop a service.

  Question: What service did you start/stop using the command? What happened when you executed the command?

  Answer:

Part 2: Disk Optimization and Resource Sharing

2.2.2 Disk Optimization Commands

- Disk optimization helps the system run smoothly by defragmenting and cleaning up unused files.
- **Task 4**: Execute the following commands and explain what each does:
  - **defrag [drive]:**
    - **Explanation:** _____
  - **chkdsk:**
    - **Explanation:** _____

Part 3: Network and OS Policies

2.3.1 Network/OS Policies for USER, GROUP, SECURITY

- Network policies are essential to ensure the security and proper management of user accounts, permissions, and groups.
- **Task 6**: Use the following commands to manage users and groups:
  - **net user [username] /add**: Add a new user.
  - **net localgroup [group name] /add [username]**: Add a user to a group.
  - **net accounts**: Display password and account policies.

  Question: What user and group did you create, and what policies were displayed?

  Answer:

Part 4: Network Services

2.4 Understanding Network Services

- Services such as ping are used for basic network troubleshooting and optimization.
- **Task 7**: Use the ping command to test the network connection to www.google.com.

  Question: What was the result? How many packets were sent, received, and lost?

  Answer:

Summary and Reflection:

1. What new commands did you learn today that will help you in OS management?

   Answer:

2. How does understanding low-level commands help in managing a server?

   Answer:
