Module 3: Implementation, Evaluation, and User Support

Course Alignment

- Learning Outcomes:

    - Analyze and identify appropriate user support strategies. (IT02, IT03)
    - Evaluate implementation tools and user-support mechanisms. (IT04, IT05)
    - Plan and implement the most appropriate tools and strategies. (IT06, IT07)

I. Overview of the Module

After completing system design and development, the next critical phase is ensuring the system is successfully deployed, evaluated, and supported. This module focuses on implementation, evaluation, and user support as key pillars for system success.

II. Implementation

Implementation is the process of transforming a developed system into a fully operational system available to end users.

Key Activities in Implementation

- System Preparation (hardware setup, server configuration, database setup)
- Data Migration (data transfer, validation, backup creation)
- System Testing (functional, integration, performance, security testing)
- User Training (orientation, demonstration, hands-on practice)
- Go-Live and Monitoring

Implementation Strategies

- Direct Changeover – Immediate replacement of the old system.
- Parallel Implementation – Old and new systems run simultaneously.
- Pilot Implementation – Limited deployment before full rollout.
- Phased Implementation – Gradual deployment by module.

III. Evaluation

Evaluation is the systematic assessment of whether the system meets functional requirements, user expectations, performance standards, and security requirements.

Evaluation Criteria

- Usability
- Functionality
- Performance Efficiency
- Reliability
- Security
- User Satisfaction

Evaluation Methods

- Surveys and Questionnaires
- Interviews
- Observation
- Usability Testing
- Analytics and Performance Reports

IV. User Support

User support includes services and resources provided to assist users in effectively using the system and ensuring long-term sustainability.

Types of User Support

- Documentation (User manuals, FAQs, guides)
- Training (Workshops, video tutorials, onboarding sessions)
- Help Desk Support (Email, chat, phone, ticketing system)
- Maintenance and Updates (Bug fixes, patches, feature improvements)

V. Performance-Based Group Activity(5 members per group)

Scenario: Your team developed a Barangay Management Information System. The system is ready for deployment in a local government unit.

- Task Requirements:
    - Create a comprehensive Implementation Plan.
    - Develop an Evaluation Plan with measurable criteria.
    - Design a complete User Support Plan.
    - Submit a 3–5 page written report with clear headings and justification.

Rubric (30 Points)

- Implementation Plan Quality – 10 points
- Evaluation Plan Depth – 8 points
- User Support Plan Completeness – 8 points
- Organization and Clarity – 4 points
