Task:

Create a program that:

1. Creates a function named GetSquare
2. Accepts one integer parameter
3. Returns the square of the number
4. Calls the function inside Main()

Expected Output:

Enter a number: 5

Square: 25

Task:

Create a function called AnalyzeString that:

1. Accepts a sentence
2. Displays:
    - Total length
    - Uppercase version
    - If it contains the word "C#"
    - First 5 characters
    -

Task:

Create a program that:

1. Uses StringBuilder
2. Asks the user to input 5 words
3. Combines them into one sentence

Example:

Input: I love programming in C#

Output: I love programming in C#

Task:

Create a program that:

1. Uses an ArrayList to store student scores.
2. Allows user to:
    - Add score
    - Remove score
    - Display all scores
    - Show average score

Challenge:

Create a function:

static double ComputeAverage(ArrayList scores)

Task:

1. Create List<string> to store names.
2. Create functions:
    - AddName()
    - RemoveName()
    - DisplayNames()
    - SearchName()
1. Display names in alphabetical order.
